# Introduction

## Components

Figure 1. Scanner Components

## Maintenance

Smudges and dirt on the unit's window can interfere with the unit's performance. If the window requires cleaning, use only a mild glass cleaner containing no ammonia. When cleaning the window, spray the cleaner onto a lint free, non-abrasive cleaning cloth then gently wipe the window clean.

If the unit's housing requires cleaning, use a mild cleaning agent that does not contain strong oxidizing chemicals. Strong cleaning agents may discolor or damage the unit's exterior.

---

## **Caution and Serial Number Labels**

*Figure 2. Label Location on the Bottom of the Scanner*

# Scanner Operation

## ***Audible Indicators***

When the scanner is operational, the scanner provides audible feedback to indicate the status of the scanner and the last scan. Eight settings are available for the tone of the beep (normal, six alternate tones and no tone).

### ***One Beep – On Power Up***

When the unit powers up, the green LED turns on, then the green LED flashes and the scanner beeps once. The green LED will remain on for the duration of the beep. The scanner is now ready to scan.

### ***One Beep – During Operation***

When the scanner successfully reads a bar code, the green LED will flash and the scanner beeps once (if programmed to do so). If the scanner does not beep once and the green light does not flash, then the bar code has not been successfully read.

---

## ***Visual Indicators***

The scanner is equipped with a red LED and green LED, which indicate the scanner's state and the status of the current scan respectively when the unit is in operation.

*Figure 3. LED Location*

### ***Green and Red LEDs Are Off***

The LEDs will not be illuminated if the scanner is not receiving power from the host or transformer.

### ***Steady Red***

Steady green indicates normal pulse or continuous laser operation. Accompanied by a razzberry tone, a steady green LED indicates that an invalid bar code has been scanned.

### ***Flashing Red***

After a period of inactivity, the ON time of the pulsing laser will be shortened. During this time the green LED will flash. This indicates that the scanner is in a power saver mode. When a bar code enters the laser field, the scanner will wake up and return to normal pulse mode.

### ***Steady Red and Single Green Flash***

When the scanner successfully reads a bar code, the green LED will flash and the scanner will beep. If the green LED does not flash and the scanner does not beep, the bar code has not been successfully read.

### ***Steady Green and Steady Red***

After a successful read, the scanner transmits the data to the host device. Some communication modes require that the host inform the scanner when data is ready to be received. If the host is not ready to accept the information, the scanner's green LED will remain on until the data can be transmitted.

---

## **Failure Modes**

### *One Razzberry Tone – On Power Up*

This indicates the scanner has experienced a laser or flipper subsystem failure. Return the unit for repair to an Authorized Service Center.

### *Continuous Razzberry Tone with no LEDs*

If, upon power up, the scanner emits a continuous razzberry tone, then the scanner has an experienced an electronic failure. Return the unit for repair to an Authorized Service Center.

### *Three Beeps – On Power Up*

If the scanner beeps three times on power up, then the non-volatile memory (NovRAM) that holds the scanner configuration has failed. You must return the unit for repair to an Authorized Service Center.

## **Typical Depth of Field by Bar Code Element Width**

<b>Bar Code Element Width</b>		<b>Depth of Field</b>	
		<b>Start</b> (From Scanner Face)	<b>End</b> (From Scanner Face)
0.13 mm	5 mil	47 mm (1.9")	111 mm (4.4")
0.19mm	7.5 mil	20 mm (.8")	163 mm (6.4")
0.33 mm	13 mil UPC-A	17 mm (0.7")	232 mm (9.1")

# Troubleshooting Guide

The following guide is for reference purposes only. Contact a customer service representative to preserve the limited warranty terms.

Symptoms	Possible Causes	Solution
<i>All Interfaces</i>		
The unit has no LEDs, beep or laser.	No power is being supplied to the unit.	Check the transformer, the outlet and power strip. Make sure the cable is plugged into the unit.
	No power is being supplied to the unit from host.	Some host systems cannot supply enough current to power the scanner. A power supply may be needed.
At power up the unit beeps two times and alternately flashes the LEDs.	There is a ROM failure.	A flash ROM upgrade is required.
At power up the unit beeps three times.	There is a non-volatile RAM failure.	Contact a customer service representative.
At power up there is a continuous razz tone.	There has been a diagnostic failure.	
At power up there is a razz tone and the green LED flashes.	There is a VLD failure.	
At power up there is a razz tone and both LEDs flash.	There is a scanning mechanism failure.	
The unit scans, communicates and beeps twice.	The same symbol timeout is set too short.	Adjust the same symbol timeout for a longer time.
The unit powers up, but does not beep.	The beeper may be disabled or no tone has been selected.	Enable beeper and select a tone.

Symptoms	Possible Causes	Solution
The unit powers up, but does not scan and/or beep.	The unit is trying to scan a particular symbology that is not enabled.	UPC/EAN, Code 39, interleaved 2 of 5, Code 93, Code 128 and Codabar are enabled by default. Verify the type of bar code being read has been selected.
The unit powers up, but does not scan and/or beep.	The bar code being scanned does not satisfy the configured criteria for character length lock or minimum length.	Verify the bar code being scanned falls into the configured criteria.  <i>The scanner defaults to a minimum of three-character bar code.</i>

# Design Specifications

## Operational

Light Source:	Visible Laser Diode (VLD) @ 650 nm	
Laser Power:	Less than 1.0 mW average	
Depth of Scan Field:	17 mm – 232 mm (0.7" – 9.1")	0.33 mm (13 mil) UPC-A Bar Code
Scan Speed:	72 ± 2 scan lines per second	
Scan Pattern:	Single scan line	
Minimum Bar Width:	4.5 mil	
Decode Capability:	Reads standard 1D and GS1 DataBar symbologies.	
System Interfaces:	USB	
Print Contrast:	20% minimum reflectance difference	
No. Characters Read:	Up to 80 data characters. The maximum number will vary based on symbology and density.	
Scan Angle:	55° Horizontal	
Pitch, Yaw:	68°, 52°	
Beeper Operation:	7 tones or no beep	
Indicators (LED):	Green = good read	
	Red = laser on, ready to scan	

## Mechanical

Length:	165 mm (6.5")
Width:	65 mm (2.6")
Height:	80 mm (3.2")
Weight:	182 g (6.42 oz)

Specifications subject to change without notice.

---

## **Electrical**

Input Voltage:	5VDC +/- 0.2V (USB port)	
Operating Power:	Standby:	700 mW
	Decoding USB:	1000 mW
Operating Current:	Standby:	140 mA average @ 5VDC
	Decoding USB:	200 mA average @ 5VDC

## **Environmental**

Temperature:	Operating:	0°C to 40°C (32°F to 104°F)
	Storage:	-40°C to 60°C (-40°F to 140°F)
Humidity:	5% to 95% relative humidity, non-condensing	
Light Levels:	Up to 100000 Lux (9290 footcandles)	
Shock:	Designed to withstand 1.0 m (3.3 ft.) drops	
Contaminants:	Sealed to resist airborne particulate contaminants	
Ventilation:	None required	

*Specifications subject to change without notice.*

# Configuration Introduction

Your new scanner has been factory configured with a set of default parameters. Since many host systems have unique formats and protocol requirements, a wide range of configurable features that may be selected using this bar code based configuration tool are provided. Once the configuration is completed, the scanner stores the settings in nonvolatile memory (NOVRAM). NOVRAM saves the settings when the power is off.

*Note: Bar code descriptions marked with an asterisk ( \* ) define a feature that is a factory default. Bar codes marked with a tilde ( ~ ) require the Multi-Code configuration method.*

## Bar Code Configuration Methods

Scanners can be bar code configured in two ways: the *Single-Code Method* and the *Multi-Code Method*.

### Single-Code Method

Most features can be enabled or disabled using the Single-Code Method.

1. Power up the scanner.
2. Scan the bar code for the desired feature.
3. The scanner will emit a multi-toned beep to indicate the configuration has been saved to NOVRAM.

### Multi-Code Method

All features can be enabled or disabled using the Multi-Code Method. A feature marked with a tilde ( ~ ) requires the Multi-Code Method.

1. Power up the scanner.
2. Scan the *Enter/Exit Configuration Mode* bar code (3 beeps).
3. Scan the bar code for the desired feature (1 beep). Multiple features can be enabled/disabled before scanning the enter/exit configuration mode bar code.
4. Scan the *Enter/Exit Configuration Mode* bar code (3 beeps) and save the new configuration. To abort a configuration change, power off the scanner before scanning the *Enter/Exit* code.

#### Enter/Exit Configuration Mode

---

## ***Returning to Factory Defaults***

Scan the *Recall Defaults* bar code to erase all previous settings and return the scanner to its factory default communication protocol.

### **Recall Defaults**

# Code Types and Decode Rules

Bar code descriptions marked with an asterisk ( \* ) define a feature that is a factory default. Bar codes marked with a tilde ( ~ ) require the Multi-Code configuration method.

## 2 of 5 Codes

### Additional Decode Features

~ **Minimum Symbol Length** – Single-line default is 3. Combine this code with the proper code bytes (on page 20), to specify the minimum number of characters in all non-UPC/EAN bar codes.

# Supplements

Enable Bookland (979) Supplement Required

---

\* Disable Bookland (979) Supplement Required

---

Enable Bookland (978) Supplement Required

---

\* Disable Bookland (978) Supplement Required

---

Enable 977 (2 Digit) Supplement Required –  
The scanner will require a 2 digit supplement to be scanned when an EAN-13 code begins with 977.

---

\* Disable 977 (2 Digit) Supplement Required

---

Enable ISBN Check Digit Transmission

---

Disable ISBN Check Digit Transmission

---

Enable Bookland to ISBN Conversion

---

\* Disable Bookland to ISBN Conversion

# Scanner Operation

## Redundant Scans

\* **0 Redundant Scans** – Requires 1 good decode for a *good scan*.

**1 Redundant Scan** – Requires 2 consecutive decodes of the same bar code data for a *good scan*.

## Data Transmission Delays

Use these codes to select the amount of delay between sending data characters from the scanner to the host. This helps prevent the scanner from overflowing host-input buffers.

\* **1 msec Intercharacter Delay**

**10 msec Intercharacter Delay**

**25 msec Intercharacter Delay**

~ **Variable msec Intercharacter Delay** – Scan this bar code and a sequence of code bytes on page 20 to set the delay between characters sent to the host system (range from 1 to 255 msec.).

## Operation Modes

\***Manual Trigger Mode** – The scanner is activated by pressing the trigger. The scanner scans until a bar code is read, or the trigger is released.

**Continuously Scan Mode** – The scanner is always in active state.

# Prefixes/Suffixes

Scan the Enter Configuration Mode bar code before trying to set these features (see the Multi-Code Method on page 11.)

## User Configurable Prefixes, All Data

~ **Configurable Prefix Character #1** – A prefix ID can be added and assigned for data transmission. Use this code with a code byte sequence, on page 20, which represents the desired character.

---

~ **Configurable Prefix Character #2** – Assigns a second configurable prefix character.

## Standard Suffix Characters

\* **Enable CR Suffix** – The scanner transmits a carriage return after each bar code.

---

**Disable CR Suffix**

---

\* **Enable LF Suffix** – The scanner transmits a line feed after each bar code. *Disabled when keyboard wedge defaults are loaded.*

---

**Disable LF Suffix**

---

**Enable UPC Suffix ID** – The scanner will transmit a suffix after any UPC/EAN bar code. The suffixes are A (UPC-A), E (UPC-E), F (EAN-13) and F (EAN-8).

---

\* **Disable UPC Suffix ID**

---

## User Configurable Suffixes, All Data

*Note: Scan the Enter/Exit Configuration mode code before trying to set this feature. Refer to Multi-Code Method on page 11.*

~ **Configurable Suffix Character #1** – A suffix ID can be added and assigned for data transmission. Use this code with a 3 code byte sequence, on page 20, which represents the desired character.

~ **Configurable Suffix Character #2** – Assigns a second configurable suffix character.

# Code Formatting

## UPC/EAN Formatting

\* Transmit UPC-A Check Digit

Do Not Transmit UPC-A Check Digit

Transmit UPC-E Check Digit

\* Do Not Transmit UPC-E Check Digit

Expand UPC-E to 12 Digits – Expand UPC-E bar codes to the 12 digit equivalent, UPC-A bar codes.

\* Do Not Expand UPC-E to 12 Digits

\* Send Number System on Expanded UPC E

Do Not Send Number System on Expanded UPC E

Enable GTIN Formatting

\* Disable GTIN Formatting

Convert UPC-A to EAN-13 – The scanner converts UPC-A to EAN-13 by transmitting a leading zero before the bar code.

\* Do Not Convert UPC-A to EAN-13

**Transmit Lead Zero on UPC-E** – This option will transmit a zero before each UPC-E bar code.

**Do Not Transmit Lead Zero on UPC-E**

**Convert EAN-8 to EAN-13** – The scanner will transmit five zeros before the bar code to convert EAN-8 to EAN-13.

\* **Do Not Convert EAN-8 to EAN-13**

# Code Bytes Usage

The scanner must be in Configuration Mode for the features requiring code bytes for configuration. The Enter/Exit Configuration Mode bar code must be scanned before starting the configuration cycle. User configurable prefix/suffix characters can then be saved by scanning the 3 digit decimal equivalent of the ASCII character into the appropriate character location with the code byte bar codes.

**Example:** To add an asterisk (\*) as a Prefix, scan the bar codes.

1. *Enter/Exit Configuration Mode* (3 beeps)
2. *Configurable Prefix #1* (1 beep)
3. *Code Byte 0* (1 beep)
4. *Code Byte 4* (2 beeps)
5. *Code Byte 2* (3 beeps)
6. *Enter/Exit Configuration Mode* (3 beeps)

## ***Technical Assistance***

Contact information for technical support, product service, and repair can be found at [www.youjjeaidc.com](http://www.youjjeaidc.com).

## **Limited Warranty**

Youjie warrants its products to be free from defects in materials and workmanship and to conform to Youjie's published specifications applicable to the products purchased at the time of shipment. This warranty does not cover any Youjie product which is (i) improperly installed or used; (ii) damaged by accident or negligence, including failure to follow the proper maintenance, service, and cleaning schedule; or (iii) damaged as a result of (A) modification or alteration by the purchaser or other party, (B) excessive voltage or current supplied to or drawn from the interface connections, (C) static electricity or electro-static discharge, (D) operation under conditions beyond the specified operating parameters, or (E) repair or service of the product by anyone other than Youjie or its authorized representatives.

This warranty shall extend from the time of shipment for the duration published by Youjie for the product at the time of purchase ("Warranty Period"). Any defective product must be returned (at purchaser's expense) during the Warranty Period to Youjie factory or authorized service center for inspection. No product will be accepted by Youjie without a Return Materials Authorization, which may be obtained by contacting Youjie. In the event that the product is returned to Youjie or its authorized service center within the Warranty Period and Youjie determines to its satisfaction that the product is defective due to defects in materials or workmanship, Youjie, at its sole option, will either repair or replace the product without charge, except for return shipping to Youjie.

EXCEPT AS MAY BE OTHERWISE PROVIDED BY APPLICABLE LAW, THE FOREGOING WARRANTY IS IN LIEU OF ALL OTHER COVENANTS OR WARRANTIES, EITHER EXPRESSED OR IMPLIED, ORAL OR WRITTEN, INCLUDING, WITHOUT LIMITATION, ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, OR NON-INFRINGEMENT.

YOUJIE'S RESPONSIBILITY AND PURCHASER'S EXCLUSIVE REMEDY UNDER THIS WARRANTY IS LIMITED TO THE REPAIR OR REPLACEMENT OF THE DEFECTIVE PRODUCT WITH NEW OR REFURBISHED PARTS. IN NO EVENT SHALL YOUJIE BE LIABLE FOR INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, AND, IN NO EVENT, SHALL ANY LIABILITY OF YOUJIE ARISING IN CONNECTION WITH ANY PRODUCT SOLD HEREUNDER (WHETHER SUCH LIABILITY ARISES FROM A CLAIM BASED ON CONTRACT, WARRANTY, TORT, OR OTHERWISE) EXCEED THE ACTUAL AMOUNT PAID TO YOUJIE FOR THE PRODUCT. THESE LIMITATIONS ON LIABILITY SHALL REMAIN IN FULL FORCE AND EFFECT EVEN WHEN YOUJIE MAY HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH INJURIES, LOSSES, OR DAMAGES. SOME STATES, PROVINCES, OR COUNTRIES DO NOT ALLOW THE EXCLUSION OR LIMITATIONS OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATION OR EXCLUSION MAY NOT APPLY TO YOU.

---

All provisions of this Limited Warranty are separate and severable, which means that if any provision is held invalid and unenforceable, such determination shall not affect the validity of enforceability of the other provisions hereof. Use of any peripherals not provided by the manufacturer may result in damage not covered by this warranty. This includes but is not limited to: cables, power supplies, cradles, and docking stations. Youjie extends these warranties only to the first end-users of the products. These warranties are non-transferable.

The duration of the limited warranty for the 90 days.
