## Revision History

Version	Description	Date
V1.0.0	Initial release.	September 1, 2016
V1.0.1	<ol style="list-style-type: none"> <li>1. Changed the range of Decode Session Timeout to 100ms - 3,600,000ms in Chapter 2.</li> <li>2. Added the <b>Host Acknowledgment</b> and <b>Keep/Delete Stored Data after Batch Transmission</b> features in Chapter 4.</li> <li>3. Added the <b>EAN-13 Beginning with 290 Add-On Code Required</b>, <b>EAN-13 Beginning with 378/379 Add-On Code Required</b>, <b>EAN-13 Beginning with 414/419 Add-On Code Required</b>, <b>EAN-13 Beginning with 434/439 Add-On Code Required</b>, <b>EAN-13 Beginning with 977 Add-On Code Required</b>, <b>EAN-13 Beginning with 978 Add-On Code Required</b>, <b>EAN-13 Beginning with 979 Add-On Code Required</b>, <b>Code 32 (Italian Pharma Code)</b>, <b>Code 32 Prefix</b>, <b>Transmit Code 32 Check Digit</b> and <b>Transmit Code 32 Start/Stop Character</b> features in Chapter 5.</li> </ol> <p><b>Note:</b> Firmware version V1.3.3 or later is required for the new features above.</p>	January 4, 2017
V1.0.2	<ol style="list-style-type: none"> <li>1. Maximum barcode length supported by the scanner is 3K bytes.</li> <li>2. Added the <b>BA</b> command (Replace a string with another) in Chapter 8.</li> </ol> <p><b>Note:</b> Firmware version V1.3.6 or later is required for the new features above.</p>	March 23, 2017
V1.0.3	Added the <b>Specify Decoding Area (Top, Bottom, Left, Right)</b> feature in Chapter 2.	April 27, 2017
V1.0.4	Updated the <b>“Dimensions of Scanner (unit: mm)”</b> section in Chapter 1.	October 31, 2017

<p>V1.1.0</p>	<ol style="list-style-type: none"> <li>1. Added the <b>Reread Timeout Reset</b> features in Chapter 2.</li> <li>2. Added the <b>Code Page</b> and <b>Character Encoding</b> features in Chapter 4.</li> <li>3. Added the <b>Enable/Disable PDF417 ECI Output, Enable/Disable QR ECI Output, Enable/Disable Data Matrix ECI Output</b> and <b>Enable/Disable Chinese Sensible Code ECI Output</b> features in Chapter 5.</li> <li>4. Added the <b>Multiple Data Formats</b> feature in Chapter 8.</li> <li>5. Added the <b>Transmit No Preamble for UPC-A</b> feature in Chapter 5.</li> <li>6. Updated the programming barcodes for the <b>Good Read Beep Volume</b> feature in Chapter 2.</li> </ol> <p><b>Note:</b> You must have firmware version V1.3.11 or later to use the features in Item 1-4, V1.3.12 or later to use the feature in Item 5, and V1.3.17 or later to use the feature in Item 6.</p>	<p>January 18, 2019</p>
<p>V1.1.1</p>	<p>Added the <b>Mode 4</b> option for the Emulate ALT+Keypad feature in Chapter 4.</p> <p><b>Note:</b> Firmware version V1.3.18 or later is required for the new feature above.</p>	<p>February 25, 2019</p>

# Preface

## Introduction

This manual provides detailed instructions for setting up and using the NLS-HR3290 series cordless 2D barcode scanner (hereinafter referred to as “**HR32 cordless scanner**” or “**the scanner**”).

## Chapter Description

- |  |  |
|--|--|
| ❖ <i>Chapter 1, Getting Started</i>        | Gives a general description of HR32 cordless scanner.  |
| ❖ <i>Chapter 2, System Settings</i>        | Introduces three configuration methods and describes how to configure general parameters of HR32 cordless scanner. |
| ❖ <i>Chapter 3, Inquiry Commands</i>       | Describes how to obtain the information of HR32 cordless scanner by scanning programming barcodes.                 |
| ❖ <i>Chapter 4, Communication Settings</i> | Describes how to configure communication mode, serial port parameters and USB function.                            |
| ❖ <i>Chapter 5, Symbologies</i>            | Lists all compatible symbologies and describes how to configure the relevant parameters.                           |
| ❖ <i>Chapter 6, Prefix &amp; Suffix</i>    | Describes how to use prefix and suffix to customize scanned data.  |
| ❖ <i>Chapter 7, Ambient Illumination</i>   | Describes how to configure the scanner to adapt it to ambient light of different intensity.                        |
| ❖ <i>Chapter 8, Data Formatter</i>         | Explains how to customize scanned data with the data formatter.  |
| ❖ <i>Chapter 9, Batch Programming</i>      | Explains how to integrate a complex programming task into a single bar code.                                       |
| ❖ <i>Appendix</i>                          | Provides factory defaults table and a bunch of frequently used programming barcodes.                               |

---

## Explanation of Icons

This icon indicates something relevant to this manual.

This icon indicates this information requires extra attention from the reader.

This icon indicates handy tips that can help you use or configure the scanner with ease.

This icon indicates practical examples that can help you to acquaint yourself with operations.

# Chapter 1 Getting Started

## Introduction

The HR32 cordless scanner reads a 1D or 2D barcode by capturing its image. Adopting the advanced **UIMG** technology independently developed by Newland Auto-ID Tech, it provides users with three scan modes, including Manual Mode, Sense Mode and Continuous Mode, tailored to different scanning needs.

An illustrated introduction to the HR32 cordless scanner is included in this chapter. If you have an HR32 cordless scanner at hand, make good use of it to develop a better understanding of this manual. This chapter is written for normal users, maintenance staff and software developers.

## Features of the HR32

- Comprehensive data capture: most 1D and 2D barcodes.
- Fast and accurate decoding capability: integrates high-performance processor and barcode decoder board.
- Easy to configure and update.

## Unpacking

Open the package and take out HR32 cordless scanner and its accessories. Check to make sure everything on the packing list is present and intact. If any contents are damaged or missing, please keep the original package and contact your dealer immediately for after-sale service.

**Note:** CD32, the cradle for HR32 cordless scanner is individually wrapped.

---

## Scanner

Fig. 1-1

### **Decode/Transmission LED:**

**Green:** Barcode decoded successfully.

Battery is fully charged.

**Blue:** Zigbee is available.

**Red:** Data transmission failed.

Device is charging.

**Purple:** Firmware update is in progress.  
There is data in FLASH memory.

---

## CD32 Cradle

### Buttons:

**P:** Batch Transmission

**M:** Pair/Search

### LEDs:

**Zigbee LED (blue):**

Zigbee is available.

**Battery LEDs (green):**

Indicate battery level (four levels)

**Fig. 1-2**

**Fig. 1-3**

## Communication Mode

Communication modes: synchronous mode (default), asynchronous mode and batch mode.

- ✧ **Synchronous Mode:** If Zigbee is available, scanned data will be transferred to the cradle immediately after a good read; if Zigbee is unavailable, the transmission of decoded data cannot be accomplished.
- ✧ **Asynchronous Mode:** If Zigbee is available, scanned data will be transferred to the cradle immediately after a good read; if Zigbee is unavailable, the decoded data will be first stored in the flash memory in a FIFO (first in first out) manner, and be sent automatically to the cradle when Zigbee becomes available.
- ✧ **Batch Mode:** The decoded data will be stored in the flash memory no matter whether Zigbee is available or not. To send the stored data to the cradle, you need to insert the scanner in the cradle and then press “P” button on the cradle.

## CD32 Data Port

Fig. 1-4

PIN	Signal	Type	Function
1	NC	-	No connection
2	NC	-	No connection
3	VCC	P	Power+ (+5V)
4	TXD	O	RS-232 output
5	RXD	I	RS-232 input
6	CTS	I	Flow control signal
7	RTS	O	
8	GND	P	Ground
9	D-	I/O	USB signal
10	D+	I/O	

---

## USB/RS-232 Port

CD32 cradle must be connected to a Host in actual application, such as PC, POS or any intelligent terminal with USB or RS-232 port, via a communication cable, either USB or RS-232 cable.

### USB

USB port on the Host

### RS-232

RS-232 port on the Host

**Note:** Please check the port on the Host and purchase the right cable.

## Connecting Cradle to a Host

Fig. 1-5

---

## Using USB Cable

**Fig. 1-6**

Connect the CD32 cradle to a Host through a USB cable with RJ45 and USB connectors:

1. Plug the RJ45 connector into the data port (see Fig.1-3) on the cradle.
2. Plug the USB connector into the USB port on the Host.
3. Plug the supplied power adapter into the power port (see Fig.1-3) on the cradle.

---

## Using RS-232 Cable

**Fig. 1-7**

Connect the CD32 cradle to a Host through an RS-232 cable with RJ45 and RS-232 connectors:

1. Plug the RJ45 connector into the data port (see Fig.1-3) on the cradle.
2. Plug the RS-232 connector into the RS-232 port on the Host.
3. Plug the supplied power adapter into the power port (see Fig.1-3) on the cradle.

---

## Power On, Sleep, Power Off, Reboot

### Powering on the scanner

Hold down the trigger on the scanner for 1 second or longer.

### Entering the sleep mode

If no operation is performed on the scanner for 5 seconds, it will automatically enter the sleep mode. (Applicable to the Manual mode only)

### Powering off the scanner

Scan the **Power Off** barcode. (See the **Operating Mode Options** in Chapter 2)

**Note:** The scanner that has remained in sleep mode for a specific time period (default: 5 minutes, programmable) will be automatically turned off. (To change the time period, see the **Power-Off Timeout** in Chapter 2).

### Rebooting the scanner

If the scanner stops responding to input or runs abnormally, press the Reset button on the scanner to reboot it.

## Maintenance

1. The scan window should be kept clean.
2. Do not scratch the scan window.
3. Use soft brush to remove the stain from the scan window.
4. Use the soft cloth to clean the window, such as eyeglass cleaning cloth.
5. Do not spray any liquid on the scan window.
6. Only use water to clean other parts of the device.

The warranty **DOES NOT** cover damages caused by inappropriate care and maintenance.

**Top View**

**Fig. 1-10**

---

---

**Dimensions of CD32 Cradle (unit: mm)**

**Fig. 1-11**

---

## Scanning Instructions

When the scanner is in the Manual scan mode, you can follow the steps below to scan a barcode:

1. Press and hold the trigger. Then the scanner will project a red aiming beam.
2. Aim the red beam across the center of barcode, as shown in Fig.1-12.
3. Release the trigger when the red beam goes off. If the barcode is decoded successfully, the scanner will beep and the decoded data will be sent to the Host.

**Note:** For the same batch of barcodes, the scanner will keep a very high success ratio in certain distance which can be regarded as the optimal scanning distance.

Fig. 1-12

---

## Scan Angle

The scanner is designed to function within a certain range of scan angles. Any unreasonable deviation may cause decoding failure.

Scan angles of the scanner:

- ◇ Pitch:  $\pm 55^\circ$ ,  $0^\circ$  Roll and  $0^\circ$  Skew (Fig. 1-13)
- ◇ Roll:  $360^\circ$ ,  $0^\circ$  Pitch and  $0^\circ$  Skew (Fig. 1-14)
- ◇ Skew:  $\pm 55^\circ$ ,  $0^\circ$  Roll and  $0^\circ$  Pitch (Fig. 1-15)

**Enter Setup**

## Chapter 2 System Settings

### Introduction

There are two ways to configure the scanner: barcode programming and command programming.

#### Barcode Programming

The scanner can be configured through scanning programming barcodes. In the following sections, we will explain the available options and features and provide the barcodes to program them.

This programming method is most straightforward. However, it requires manually scanning barcodes. As a result, errors are more likely to occur.

#### Command Programming

The scanner can also be configured by command strings sent from the Host. In the following sections, the commands will be provided along with programming barcodes.

Users can also design an application to send those command strings to their scanners.

**Note: All settings except temporary ones are stored in non-volatile memory of the scanner and will not be lost by removing power from the scanner.**

---

## Programming Barcode/Command/Function

The figure above is an example that shows you the programming barcode and command for the **Exit Setup** function:

1. The **Exit Setup** barcode
2. The **Exit Setup** command
3. The function/feature that can be enabled by using the programming barcode or command listed above.
4. \*\* indicates factory default setting.

0006000

\*\* Exit Setup

0006010

**Enter Setup**

---

## Use of Programming Barcodes

Scanning the **Enter Setup** barcode can enable the scanner to enter the setup mode. Then you can scan a number of programming barcodes to configure your scanner. To exit the setup mode, scan the **Exit Setup** barcode.

After scanning the **Exit Setup** barcode, only some special programming barcodes, such as the **Enter Setup** barcode, can be read.

0006000

**\*\* Exit Setup**

0006000

**\*\* Exit Setup**

0006010

**Enter Setup**

---

## Factory Defaults

Scanning the **Reset Scanner** barcode/the **Reset Cradle** barcode can restore the scanner/cradle to the factory default settings.

You may need to reset your scanner/cradle when:

1. scanner/cradle is not properly configured so that the scanner fails to decode barcodes or to communicate with cradle;
2. you forget previous configuration and want to avoid its impact;
3. functions that are rarely used have been enabled for the time being.

## Pairing Settings

### Pair Scanner with Cradle

A cradle with its DIP switch (see Fig. 1-3) in the “C” position works as a normal cradle.

The scanner and cradle must be paired for communication to occur. A cradle can be paired with multiple scanners.

You need to perform this operation manually: After the scanner and cradle are powered on, insert the scanner in the cradle and then press the “M” button on the cradle. The scanner beeps on a successful pairing.

### Pair Cradle with Zigbee Router

A cradle with its DIP switch (see Fig. 1-3) in the “R” position functions as a Zigbee router. You can extend communication distance of the cradle by pairing multiple Zigbee routers with it.

To pair a cradle (DIP switch in the “C” position) with a Zigbee router (DIP switch in the “R” position):

- a. Pair a scanner with the cradle by following the instructions above.
- b. Insert the paired scanner in the Zigbee router and then press the “M” button on the router.

The scanner beeps on a successful pairing.

### Search Paired Scanners

When scanner(s) and cradle are powered on, press the “M” button on the cradle and the paired scanner(s) will beep.

## Scan Mode

### Manual Mode

A trigger pull activates a decode session. The decode session continues until the barcode is decoded or you release the trigger or decode session timeout expires.

0302000

\*\* Manual Mode

### Decode Session Timeout

This parameter sets the maximum time decode session continues during a scan attempt. It is programmable in 1ms increments from 100ms to 3,600,000ms. The default setting is 3,000ms.

0313000

Decode Session Timeout

**E**  
*example*

#### Set the Decode Session Timeout to 1,500ms:

1. Scan the **Enter Setup** barcode.
2. Scan the **Decode Session Timeout** barcode.
3. Scan the numeric barcodes “1”, “5”, “0” and “0”. (See the **Digit Barcodes** in **Appendix**)
4. Scan the **Save** barcode. (See the **Save/Cancel Barcodes** in **Appendix**)
5. Scan the **Exit Setup** barcode.

0006000

\*\* Exit Setup

0006010

**Enter Setup**

---

### **Level Trigger/Pulse Trigger**

**Level Trigger:** During a scan attempt, the decode session ends once the Trigger is released.

**Pulse Trigger:** During a scan attempt, the release of the Trigger does not affect the decode session.

0313090

**\*\* Level Trigger**

0313091

**Pulse Trigger**

### **Auto Sleep**

Auto Sleep allows the scanner in the Manual Mode to automatically enter the sleep or low power mode if no operation or communication is performed for a time period (user programmable). When the scanner is in the sleep mode, pressing the Trigger or receiving command from the host device can awake the scanner. The scanner returns to full operation within 100ms.

0313060

**\*\* Enable Auto Sleep**

0313070

**Disable Auto Sleep**

0006000

**\*\* Exit Setup**

0006010

**Enter Setup**

---

The parameter below specifies how long the scanner remains idle (no operation or communication occurs) before it is put into sleep mode. It is programmable in 1ms increments from 0ms to 65,535ms. The default setting is 500ms.

0313050

**Time Period from Idle to Sleep**

**E**  
*xample*

**Set the Time Period from Idle to Sleep to 500ms:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Time Period from Idle to Sleep** barcode.
3. Scan the numeric barcodes “5”, “0” and “0”. (See the ***Digit Barcodes*** in **Appendix**)
4. Scan the **Save** barcode. (See the ***Save/Cancel Barcodes*** in **Appendix**)
5. Scan the **Exit Setup** barcode.

0006000

**\*\* Exit Setup**

0006010

**Enter Setup**

## Reread Timeout

Reread Timeout can avoid undesired rereading of same barcode in a given period of time.

To enable/disable the Reread Timeout, scan the appropriate barcode below.

**Enable Reread Timeout:** Do not allow the scanner to re-read same barcode before the Reread Timeout expires.

**Disable Reread Timeout:** Allow the scanner to re-read same barcode.

0313161

**\*\* Disable Reread Timeout**

0313171

**Enable Reread Timeout**

The following parameter sets the timeout between decodes for same barcode. It is programmable in 1ms increments from 0ms to 65,535ms. The default setting is 1,500ms.

0313010

**Reread Timeout**

**E**  
*xample*

### Set the Reread Timeout to 2,500ms:

1. Scan the **Enter Setup** barcode.
2. Scan the **Reread Timeout** barcode.
3. Scan the numeric barcodes “2”, “5”, “0” and “0”. (See the **Digit Barcodes** in **Appendix**)
4. Scan the **Save** barcode. (See the **Save/Cancel Barcodes** in **Appendix**)
5. Scan the **Exit Setup** barcode.

0006000

**\*\* Exit Setup**

0006010

**Enter Setup**

---

You may wish to restart the reread timeout when the scanner encounters the same barcode that was decoded in the last scan session before the reread timeout expires. To enable this feature, scan the **Reread Timeout Reset On** barcode. This feature is only effective when **Reread Timeout** is enabled.

0313200

**\*\* Reread Timeout Reset Off**

0313201

**Reread Timeout Reset On**

0006000

**\*\* Exit Setup**

0006010

**Enter Setup**

---

## Sense Mode

The scanner waits for the image stabilization timeout to expire before activating a decode session every time it detects a change in ambient illumination. Decode session continues until the barcode is decoded or the decode session timeout expires.

In the Sense mode, a trigger pull can also activate a decode session. The decode session continues until the barcode is decoded or the trigger is released. When the session ends, the scanner continues to monitor ambient illumination.

0302010

**Sense Mode**

## Decode Session Timeout

This parameter sets the maximum time decode session continues during a scan attempt. It is programmable in 1ms increments from 100ms to 3,600,000ms. The default setting is 3,000ms.

0313000

**Decode Session Timeout**

**E**  
*xample*

### Set the Decode Session Timeout to 1,500ms:

1. Scan the **Enter Setup** barcode.
2. Scan the **Decode Session Timeout** barcode.
3. Scan the numeric barcodes “1”, “5”, “0” and “0”. (See the ***Digit Barcodes*** in **Appendix**)
4. Scan the **Save** barcode. (See the ***Save/Cancel Barcodes*** in **Appendix**)
5. Scan the **Exit Setup** barcode.

0006000

**\*\* Exit Setup**

0006010

Enter Setup

---

## Image Stabilization Timeout

This parameter defines the amount of time that the scanner waits for the image to stabilize to a point that it can be decoded with more accuracy. It is programmable in 1ms increments from 0ms to 1,600ms. The default setting is 500ms.

0313120

Image Stabilization Timeout

**E**  
*xample*

### Set the Image Stabilization Timeout to 1,500ms:

1. Scan the **Enter Setup** barcode.
2. Scan the **Image Stabilization Timeout** barcode.
3. Scan the numeric barcodes “1”, “5”, “0” and “0”. (See the **Digit Barcodes** in **Appendix**)
4. Scan the **Save** barcode. (See the **Save/Cancel Barcodes** in **Appendix**)
5. Scan the **Exit Setup** barcode.

## Continue after Good Read

**Continue after Good Read:** The scanner starts next decode session after good read.

**Pause after Good Read:** The scanner starts another round of illumination monitoring and image stabilization after good read.

0313130

\*\* Pause after Good Read

0313131

Continue after Good Read

0006000

\*\* Exit Setup

0006010

**Enter Setup**

### Reread Timeout

Reread Timeout can avoid undesired rereading of same barcode in a given period of time.

To enable/disable the Reread Timeout, scan the appropriate barcode below.

**Enable Reread Timeout:** Do not allow the scanner to re-read same barcode before the Reread Timeout expires.

**Disable Reread Timeout:** Allow the scanner to re-read same barcode.

0313020

**Disable Reread Timeout**

0313030

**\*\* Enable Reread Timeout**

The following parameter sets the timeout between decodes for same barcode. It is programmable in 1ms increments from 0ms to 65,535ms. The default setting is 1,500ms.

0313010

**Reread Timeout**

**E**  
*xample*

#### **Set the Reread Timeout to 2,500ms:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Reread Timeout** barcode.
3. Scan the numeric barcodes “2”, “5”, “0” and “0”. (See the ***Digit Barcodes*** in **Appendix**)
4. Scan the **Save** barcode. (See the ***Save/Cancel Barcodes*** in **Appendix**)
5. Scan the **Exit Setup** barcode.

0006000

**\*\* Exit Setup**

0006010

**Enter Setup**

---

You may wish to restart the reread timeout when the scanner encounters the same barcode that was decoded in the last scan session before the reread timeout expires. To enable this feature, scan the **Reread Timeout Reset On** barcode. This feature is only effective when **Reread Timeout** is enabled.

0313200

**\*\* Reread Timeout Reset Off**

0313201

**Reread Timeout Reset On**

0006000

**\*\* Exit Setup**

0006010

**Enter Setup**

## Sensitivity

Sensitivity specifies the degree of acuteness of the scanner's response to changes in ambient illumination. The higher the sensitivity, the lower requirement in illumination change to trigger the scanner. You can select an appropriate degree of sensitivity that fits the ambient environment.

0312010

**Medium Sensitivity**

0312000

**Low Sensitivity**

0312020

**High Sensitivity**

0312030

**Enhanced Sensitivity**

If the above four options fail to meet your needs, you may program the threshold value of illumination change.

Illumination changes that reaches or surpasses the predefined threshold value will cause the scanner to start a decode session. The lower the threshold value, the greater the sensitivity of the scanner. The default threshold value is 2.

0312040

**Threshold Value of Illumination Change (1~20)**

**E**  
*sample*

**Set the threshold value of illumination change to 4:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Threshold Value of Illumination Change** barcode.
3. Scan the numeric barcode "4". (See the **Digit Barcodes** in **Appendix**)
4. Scan the **Save** barcode. (See the **Save/Cancel Barcodes** in **Appendix**)
5. Scan the **Exit Setup** barcode.

0006000

**\*\* Exit Setup**

0006010

**Enter Setup**

---

## Continuous Mode

If the Continuous mode is enabled, the scanner automatically starts one decode session after another. To suspend/resume barcode reading, simply press the trigger.

0302020

**Continuous Mode**

## Decode Session Timeout

This parameter sets the maximum time decode session continues during a scan attempt. It is programmable in 1ms increments from 100ms to 3,600,000ms. The default setting is 3,000ms.

0313000

**Decode Session Timeout**

**E**  
*sample*

### Set the Decode Session Timeout to 1,500ms:

1. Scan the **Enter Setup** barcode.
2. Scan the **Decode Session Timeout** barcode.
3. Scan the numeric barcodes “1”, “5”, “0” and “0”. (See the **Digit Barcodes** in **Appendix**)
4. Scan the **Save** barcode. (See the **Save/Cancel Barcodes** in **Appendix**)
5. Scan the **Exit Setup** barcode.

0006000

**\*\* Exit Setup**

0006010

**Enter Setup**

### Timeout between Decodes

This parameter sets the timeout between decode sessions. When a decode session ends, next session will not happen until the timeout between decodes expires. It is programmable in 1ms increments from 0ms to 65,535ms. The default setting is 1,000ms.

0313040

**Timeout between Decodes**

**E**  
*xample*

#### Set the Timeout between Decodes to 1,500ms:

1. Scan the **Enter Setup** barcode.
2. Scan the **Timeout between Decodes** barcode.
3. Scan the numeric barcodes “1”, “5”, “0” and “0”. (See the **Digit Barcodes** in **Appendix**)
4. Scan the **Save** barcode. (See the **Save/Cancel Barcodes** in **Appendix**)
5. Scan the **Exit Setup** barcode.

### Reread Timeout

Reread Timeout can avoid undesired rereading of same barcode in a given period of time.

To enable/disable the Reread Timeout, scan the appropriate barcode below.

**Enable Reread Timeout:** Do not allow the scanner to re-read same barcode before the Reread Timeout expires.

**Disable Reread Timeout:** Allow the scanner to re-read same barcode.

0313160

**\*\* Disable Reread Timeout**

## Decode Area

### Whole Area Decoding

When this option is enabled, the scanner attempts to decode barcode(s) within its field of view, from the center to the periphery, and transmits the barcode that has been first decoded.

0322000

**\*\* Whole Area Decoding**

### Specific Area Decoding

The scanner attempts to read barcode(s) within a specified decoding area and transmits the barcode that has been first decoded. This option allows the scanner to narrow its field of view to make sure it reads only those barcodes intended by the user. For instance, if multiple barcodes are placed closely together, specific area decoding in conjunction with appropriate pre-defined decoding area will insure that only the desired barcode is read.

0322010

**Specific Area Decoding**

### Specify Decoding Area

If **Specific Area Decoding** is enabled, the scanner only reads barcodes that intersect the predefined decoding area.

The default decoding area is an area of 40% top, 60% bottom, 40% left and 60% right of the scanner's field of view, as shown in the figure below. In the following example, the white box is the decoding area. Since Barcode 1 passes through the decoding area, it will be read. Barcode 2 does not pass through the decoding area, so it will not be read.

---

0006000

**\*\* Exit Setup**

0006010

Enter Setup

You can define the decoding area using the **Top of Decoding Area**, **Bottom of Decoding Area**, **Left of Decoding Area** and **Right of Decoding Area** barcodes as well as numeric barcode(s) that represent(s) a desired percentage (0-100).

0322030

## Chapter 3 Inquiry Commands

### Introduction

This chapter provides programming barcodes you may need to obtain device information.

### Obtain Scanner Information

You can scan the barcode below to inquire the scanner information (such as model number, serial number, manufacture date and firmware version). The result will be sent to the Host.

EM00300

**Inquire All Information About Scanner**

### Obtain Cradle Information

You can scan the barcode below to inquire the cradle information (such as model number, serial number, manufacture date and firmware version). The result will be sent to the Host.

EC00320

**Inquire All Information About Cradle**

0006000

**\*\* Exit Setup**

0006010

**Enter Setup**

---

## Obtain FLASH Information

To inquire the number of the barcodes stored in flash memory or empty the memory, scan the appropriate barcode below.

EM04301

**Inquire the Number of Barcodes in Flash Memory**

EM04303

**Delete All Barcodes in Flash Memory**

0006000

**\*\* Exit Setup**

0006010

Enter Setup

## Chapter 4 Communication Settings

### Introduction

Three types of wireless communication between scanner and cradle: synchronous, asynchronous and batch modes.

Two types of wired communication between cradle and the Host: RS-232 and USB.

### Wireless Communication

Wireless communication modes include Synchronous (default), Asynchronous and Batch modes.

- ✧ **Synchronous Mode:** If Zigbee is available, scanned data will be transferred to the cradle immediately after a good read; if Zigbee is unavailable, the transmission of decoded data cannot be accomplished.
- ✧ **Asynchronous Mode:** If Zigbee is available, scanned data will be transferred to the cradle immediately after a good read; if Zigbee is unavailable, scanned data will be first stored in the flash memory and be sent automatically to the cradle in a FIFO (first in first out) manner when Zigbee becomes available.
- ✧ **Batch Mode:** Scanned data will be stored in the flash memory no matter whether Zigbee is available or not. To send the stored data to the cradle, you need to insert the scanner in the cradle and then press “P” button on the cradle.

EM04310

**\*\* Synchronous Mode**

EM04311

**Asynchronous Mode**

EM04312

**Batch Mode**

0006000

**\*\* Exit Setup**

0006010

**Enter Setup**

## Host Acknowledgment

Some applications require that the host device validate incoming barcode data and provide acknowledgment to the scanner. When Host Acknowledgment is turned on, the scanner waits for this acknowledgment after each scan. If scanned data is deemed valid, the host device returns 0x06 and the green LED on the scanner flashes twice along with the Validation Passed beep; if the data is deemed invalid, the host device returns 0x15 and the red LED on the scanner flashes thrice along with the Validation Failed beep. This feature is only available in the Synchronous mode.

EC70120

**\*\* Host Acknowledgment Off**

EC70121

**Host Acknowledgment On**

**Host Acknowledgment Timeout** specifies the maximum time the scanner waits for the acknowledgment from the host device.

EC70122

**Host Acknowledgment Timeout 1s**

EC70123

**\*\* Host Acknowledgment Timeout 3s**

EC70124

**Host Acknowledgment Timeout 5s**

## Keep/Delete Stored Data after Batch Transmission

You may scan the appropriate barcode below to choose whether to keep or delete stored data in the flash memory after batch transmission (i.e. data transmission in the Batch mode).

EM04325

**\*\* Auto Delete Stored Data after Transmission**

EM04324

**Keep Stored Data after Transmission**

## RS-232 Interface

### Baud Rate

When the CD32 cradle is connected to the Host via serial port, you need to set communication parameters (including baud rate, parity check, data bit and stop bit) to match the host device.

Baud rate is the number of bits of data transmitted per second. Set the cradle's baud rate to match the Host requirements. Otherwise, data may not reach the Host or may reach it in distorted form. The default baud rate is 115200.

EC02103

**Baud Rate 4800**

EC02104

**Baud Rate 9600**

EC02105

**Baud Rate 14400**

EC02106

**Baud Rate 19200**

EC02107

**Baud Rate 38400**

EC02110

**Baud Rate 57600**

EC02111

**\*\* Baud Rate 115200**

0006000

**\*\* Exit Setup**

0006010

**Enter Setup**

---

## Parity Check

By default, the **None** option is enabled.

EC02120

**\*\* None**

EC02122

**Even**

EC02121

**Odd**

## Stop Bit

By default, the **1 Stop Bit** option is enabled.

EC02131

**\*\* 1 Stop Bit**

EC02133

**2 Stop Bits**

0006000

**\*\* Exit Setup**

0006010

**Enter Setup**

---

## Hardware Flow Control

By default, the hardware flow control is disabled.

EC02140

**\*\* Disable Hardware Flow Control**

EC02143

**Enable Hardware Flow Control**

Before enabling hardware flow control, make sure that RTS/CTS signal line is contained in RS-232 cable. Without the signal line, RS-232 communication errors will occur.

## Data Bit

8 data bits are used and cannot be altered.

0006000

**\*\* Exit Setup**

0006010

**Enter Setup**

---

## USB Interface

Two communication options are provided when the cradle is connected to the Host via USB interface:  
USB HID-KBW and USB COM Port Emulation

### USB HID-KBW

EC02300

---

## Convert Case

Scan the appropriate barcode below to convert barcode data to your desired case.

EC02230

**\*\* No Case Conversion**

EC02232

**Convert All to Lower Case**

EC02231

**Convert All to Upper Case**

EC02233

**Invert Upper and Lower Case Characters**

**E**  
*xample*

When the **Invert Upper and Lower Case Characters** feature is enabled, barcode data “AbC” is transmitted as “aBc”.

0006000

**\*\* Exit Setup**

0006010

Enter Setup

---

## Emulate ALT+Keypad

This feature allows any ASCII character (0x00 - 0xFF) to be sent over the numeric keypad no matter which keyboard type is selected. Since sending a character involves multiple keystroke emulations, this method appears less efficient.

The following options are available:

- **Disable:** No ASCII character is sent in the ALT+Keypad way.
- **Mode 1:** ASCII characters not supported by the selected keyboard type but falling into 0x20~0xFF are sent in the ALT+Keypad way.
- **Mode 2:** ASCII characters falling into 0x20~0xFF are sent in the ALT+Keypad way.
- **Mode 3:** All ASCII characters (0x00~0xFF) are sent in the ALT+Keypad way.
- **Mode 4:** ASCII characters falling into 0x00~0x1F are sent in the ALT+Keypad way.

**Note:** In the event of a conflict between **Function Key Mapping** and **Mode 3/Mode 4, Function Key Mapping** shall govern.

EC02260

**\*\* Disable**

EC02261

**Mode 1**

EC02262

**Mode 2**

EC02263

**Mode 3**

EC02266

**Mode 4**

0006000

**\*\* Exit Setup**

0006010

Enter Setup

**Example:** Supposing US keyboard is selected, barcode data "ADF" (65/208/70) is sent as below:

(1) **Mode 1** is enabled:

"A" -- Keystroke "A"

"D" -- "ALT Make" + "208" + "ALT Break"

"F" -- Keystroke "F"

(2) **Mode 3** is enabled:

"A" -- "ALT Make" + "065" + "ALT Break"

"D" -- "ALT Make" + "208" + "ALT Break"

"F" -- "ALT Make" + "070" + "ALT Break"

### Function Key Mapping

When Function Key Mapping is enabled, function characters (0x00 - 0x1F) are sent as ASCII sequences over the keypad. For more information, see **ASCII Function Key Mapping Table** in **Appendix**.

EC02265

Enable Function Key Mapping

EC02264

\*\* Disable Function Key Mapping

**Example:** Barcode data 0x16

 T	Enable Function Key Mapping	Ctrl+V
	Disable Function Key Mapping	F1

0006000

\*\* Exit Setup

0006010

Enter Setup

## Emulate Numeric Keypad

When this feature is disabled, sending barcode data is emulated as keystroke(s) on main keyboard.

To enable this feature, scan the Emulate Numeric Keypad barcode. Sending a number (0-9) is emulated as keystroke(s) on numeric keypad, whereas sending other character like “+”, “\_”, “\*”, “/” and “.” is still emulated as keystrokes on main keyboard.

EC02251

**\*\* Do Not Emulate Numeric Keypad**

EC02250

**Emulate Numeric Keypad**

## Code Page

Code pages define the mapping of character codes to characters. If the data received does not display with the proper characters, it may be because the barcode being scanned was created using a code page that is different from the one the host program is expecting. If this is the case, select the code page with which the barcodes were created by scanning the appropriate barcode below. This feature is only effective when **Emulate ALT+Keypad** is turned on.

EC02270

**\*\* Code Page 1252 (West European Latin)**

## USB COM Port Emulation

To use this feature, a driver is required.

EC02301

USB COM Port Emulation

## USB HID-POS

### Introduction

The USB HID-POS interface is recommended for new application programs. It can send up to 56 characters in a single USB report and appears more efficient than keyboard emulation.

Features:

- ✧ HID based, no custom driver required.
- ✧ Way more efficient in communication than keyboard emulation and traditional RS-232 interface.

**Note:** USB HID-POS does not require a custom driver. However, a HID interface on Windows 98 does. All HID interfaces employ standard driver provided by the operating system. Use defaults when installing the driver.

EC02302

USB HID-POS

### Access the Scanner with Your Program

Use CreateFile to access the scanner as a HID device and then use ReadFile to deliver the scanned data to the application program. Use WriteFile to send data to the scanner.

For detailed information about USB and HID interfaces, go to [www.USB.org](http://www.USB.org).

0006000

\*\* Exit Setup

0006010

Enter Setup

### Acquire Scanned Data

After scanning and decoding a barcode, the scanner sends the following input report:

	Bit							
Byte	7	6	5	4	3	2	1	0
0	Report ID = 0x02							
1	Length of the barcode							
2-57	Decoded data (1-56)							
58-60	AIM ID							
61-62	Reserved							
63	-	-	-	-	-	-	-	Decoded Data Continued

### Send Data to the Scanner

This output report is used to send data to the device. All programming commands can be used.

	Bit							
Byte	7	6	5	4	3	2	1	0
0	Report ID = 0x04							
1	Length of the output data							
2-63	Output data (1-62)							

### VID/PID

USB uses VID (Vendor ID) and PID (Product ID) to identify and locate a device. The VID is assigned by USB Implementers Forum. Newland's vendor ID is 1EAB (Hex). A PID is assigned to each interface.

Product	Interface	PID (Hex)	PID (Dec)
HR3290 Cordless	USB HID-KBW	0C03	3075
	USB COM Port Emulation	0C06	3078
	USB HID-POS	0C10	3088

0006000

\*\* Exit Setup

0006010

## Chapter 5 Symbologies

### Introduction

Every symbology (barcode type) has its own unique attributes. This chapter provides programming barcodes for configuring the scanner so that it can identify various barcode symbologies. The more symbologies you enable, the slower your scanner decodes. It is recommended to disable those that are rarely used to improve the performance of the scanner.

Note: Maximum barcode length supported by the scanner is 3K bytes.

### General Settings

#### Disable All Symbologies

If the **Disable All Symbologies** feature is enabled, the scanner can only identify the programming barcodes.

0001010

**Disable All Symbologies**

#### Enable All Symbologies

If the **Enable All Symbologies** feature is enabled, the scanner can read all compatible barcode symbologies as well as the programming barcodes.

0001020

## Video Reverse

The **Video Reverse** feature only applies to 2D barcodes.

Regular barcode: Dark image on a bright background.

Inverse barcode: Bright image on a dark background.

The examples of regular barcode and inverse barcode are shown below.

Regular Barcode

Inverse Barcode

Video Reverse is used to allow the scanner to read barcodes that are inverted.

**Video Reverse ON:** Read both regular barcodes and inverse barcodes.

**Video Reverse OFF:** Read regular barcodes only.

The scanner shows a slight decrease in scanning speed when Video Reverse is ON.

Video Reverse ON

\*\* Video Reverse OFF

0006000

\*\* Exit Setup

0006010

## Code 128

### Restore Factory Defaults

0400000

**Restore the Factory Defaults of Code 128**

### Enable/Disable Code 128

0400020

**\*\* Enable Code 128**

0400010

**Disable Code 128**

If the scanner fails to identify Code 128 barcodes, you may first try this solution by scanning the **Enter Setup** barcode and then **Enable Code 128** barcode.

0006000

**\*\* Exit Setup**

0006010  
Enter Setup

---

## Set Length Range for Code 128

The scanner can be configured to only decode Code 128 barcodes with lengths that fall between (inclusive) the minimum and maximum lengths. To accomplish it, you need to set the minimum and maximum lengths.

Set the Minimum Length (Default: 1)

Set the Maximum Length (Default: 127)

Maximum length of a 1D barcode should not exceed 127 bytes. If minimum length is set to be greater than maximum length, the scanner only decodes Code 128 barcodes with either the minimum or maximum length. If minimum length is same as maximum length, only Code 128 barcodes with that length are to be decoded.

**Set the scanner to decode Code 128 barcodes containing between 8 and 12 characters:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set the Minimum Length** barcode.
3. Scan the numeric barcode “8”. (See the *Digit Barcodes* in **Appendix**)
4. Scan the **Save** barcode. (See the *Save/Cancel Barcodes* in **Appendix**)
5. Scan the **Set the Maximum Length** barcode.
6. Scan the numeric barcode “1”.
7. Scan the numeric barcode “2”.
8. Scan the **Save** barcode.
9. Scan the **Exit Setup** barcode.

## Add-On Code

A UPC-A barcode can be augmented with a two-digit or five-digit add-on code to form a new one. In the examples below, the part surrounded by blue dotted line is a UPC-A barcode while the part circled by red dotted line is add-on code.

0404050

**\*\* Disable 2-Digit Add-On Code**

0404060

**Enable 2-Digit Add-On Code**

0404070

**\*\* Disable 5-Digit Add-On Code**

0404080

**Enable 5-Digit Add-On Code**

**Enable 2-Digit Add-On Code/ Enable 5-Digit Add-On Code:** The scanner decodes a mix of UPC-A barcodes with and without 2-digit/5-digit add-on codes.

**Disable 2-Digit Add-On Code/ Disable 5-Digit Add-On Code:** The scanner decodes UPC-A and ignores the add-on code when presented with a UPC-A plus add-on barcode. It can also decode UPC-A barcodes without add-on codes.

0006000

**\*\* Exit Setup**

0006010

**Enter Setup**

## Add-On Code Required

**UPC-A Add-On Code Required:** The scanner only decodes UPC-A barcodes that contain add-on codes.

**UPC-A Add-On Code Not Required:** The scanner decodes a mix of UPC-A barcodes with and without add-on codes.

0404110

**UPC-A Add-On Code Required**

0404120

**\*\* UPC-A Add-On Code Not Required**

## Transmit Preamble Character

Preamble characters (Country Code and System Character) can be transmitted as part of a UPC-A barcode. Select one of the following options for transmitting UPC-A preamble to the host device: transmit system character only, or transmit system character and country code ("0" for USA), or transmit no preamble.

0404090

**\*\* System Character**

0404100

## Interleaved 2 of 5

### Restore Factory Defaults

0405000

**Restore the Factory Defaults of Interleaved 2 of 5**

### Enable/Disable Interleaved 2 of 5

0405020

**\*\* Enable Interleaved 2 of 5**

0405010

**Disable Interleaved 2 of 5**

If the scanner fails to identify Interleaved 2 of 5 barcodes, you may first try this solution by scanning the **Enter Setup** barcode and then **Enable Interleaved 2 of 5** barcode.

0006000

**\*\* Exit Setup**

0006010

Enter Setup

## Set Length Range for Interleaved 2 of 5

The scanner can be configured to only decode Interleaved 2 of 5 barcodes with lengths that fall between (inclusive) the minimum and maximum lengths. To accomplish it, you need to set the minimum and maximum lengths.

0405030

Set the Minimum Length (Default: 6)

0405040

Set the Maximum Length (Default: 100)

Maximum length of a 1D barcode should not exceed 127 bytes. If minimum length is set to be greater than maximum length, the scanner only decodes Interleaved 2 of 5 barcodes with either the minimum or maximum length. If minimum length is same as maximum length, only Interleaved 2 of 5 barcodes with that length are to be decoded.

**Set the scanner to decode Interleaved 2 of 5 barcodes containing between 8 and 12 characters:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set the Minimum Length** barcode.
3. Scan the numeric barcode "8". (See the *Digit Barcodes* in **Appendix**)
4. Scan the **Save** barcode. (See the *Save/Cancel Barcodes* in **Appendix**)
5. Scan the **Set the Maximum Length** barcode.
6. Scan the numeric barcode "1".
7. Scan the numeric barcode "2".
8. Scan the **Save** barcode.
9. Scan the **Exit Setup** barcode.

0006000

\*\* Exit Setup

0006010

Enter Setup

## Check Digit Verification

A check digit is optional for Interleaved 2 of 5 and can be added as the last digit. It is a calculated value used to verify the integrity of the data.

**Disable:** The scanner transmits Interleaved 2 of 5 barcodes as is.

**Do Not Transmit Check Digit After Verification:** The scanner checks the integrity of all Interleaved 2 of 5 barcodes to verify that the data complies with the check digit algorithm. Barcodes passing the check will be transmitted except the last digit, whereas those failing it will not be transmitted.

**Transmit Check Digit After Verification:** The scanner checks the integrity of all Interleaved 2 of 5 barcodes to verify that the data complies with the check digit algorithm. Barcodes passing the check will be transmitted, whereas those failing it will not be transmitted.

Since Interleaved 2 of 5 must always have an even number of digits, a zero may need to be added as the first digit when the check digit is added. The check digit is automatically generated when making Interleaved 2 of 5 barcodes.

0405050

**\*\* Disable**

0405060

**Do Not Transmit Check Digit After Verification**

0405070

**Transmit Check Digit After Verification**

If the **Do Not Transmit Check Digit After Verification** option is enabled, Interleaved 2 of 5 barcodes with a length that is less than the configured minimum length after having the check digit excluded will not be decoded. (For example, when the **Do Not Transmit Check Digit After Verification** option is enabled and the minimum length is set to 4, Interleaved 2 of 5 barcodes with a total length of 4 characters including the check digit cannot be read.)

**Transmit Check Digit**

If you select a check digit algorithm and the **Do Not Transmit Check Digit** option, Code 11 barcodes with a length that is less than the configured minimum length after having the check digit(s) excluded will not be decoded. (For example, when the **One Check Digit, MOD11** and **Do Not Transmit Check Digit** options are enabled and the minimum length is set to 4, Code 11 barcodes with a total length of 4 characters including the check digit cannot be read.)

## Set Length Range for AIM-128

The scanner can be configured to only decode AIM-128 barcodes with lengths that fall between (inclusive) the minimum and maximum lengths. To accomplish it, you need to set the minimum and maximum lengths.

0423030

Set the Minimum Length (Default: 1)

0423040

Set the Maximum Length (Default: 127)

Maximum length of a 1D barcode should not exceed 127 bytes. If minimum length is set to be greater than maximum length, the scanner only decodes AIM-128 barcodes with either the minimum or maximum length. If minimum length is same as maximum length, only AIM-128 barcodes with that length are to be decoded.

**Set the scanner to decode AIM-128 barcodes containing between 8 and 12 characters:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set the Minimum Length** barcode.
3. Scan the numeric barcode “8”. (See the *Digit Barcodes* in **Appendix**)
4. Scan the **Save** barcode. (See the *Save/Cancel Barcodes* in **Appendix**)
5. Scan the **Set the Maximum Length** barcode.
6. Scan the numeric barcode “1”.
7. Scan the numeric barcode “2”.
8. Scan the **Save** barcode.
9. Scan the **Exit Setup** barcode.

0006000

\*\* Exit Setup

0006010

## Chapter 6 Prefix & Suffix

### Introduction

A 1D barcode could contain digits, letters, symbols, etc. A 2D barcode could contain more data, such as Chinese characters and other multi-byte characters. However, in real applications, they do not and should not have all information we need, such as barcode type, data acquisition time and delimiter, in order to keep the barcodes short and flexible.

Prefix and suffix are how to fulfill the needs mentioned above. They can be added, removed and modified while the original barcode data remains intact.

0006000

**\*\* Exit Setup**

0006010

## Custom Prefix

### Enable/Disable Custom Prefix

If custom prefix is enabled, you are allowed to append to the data a user-defined prefix that cannot exceed 10 characters. For example, if the custom prefix is “AB” and the barcode data is “123”, the Host will receive “AB123”.

0305000

\*\* Disable Custom Prefix

0305010

Enable Custom Prefix

### Set Custom Prefix

To set a custom prefix, scan the **Set Custom Prefix** barcode and then the numeric barcodes corresponding to the hexadecimal value of a desired prefix. To save the settings, scan the **Save** barcode.

**Note:** A custom prefix cannot exceed 10 characters.

0300000

Set Custom Prefix

**E**  
*xample*

Set the custom prefix to “CODE” (its hexadecimal value is 0x43/0x4F/0x44/0x45):

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Custom Prefix** barcode.
3. Scan the numeric barcodes “4”, “3”, “4”, “F”, “4”, “4”, “4” and “5”. (See the **Digit Barcodes** in **Appendix**)
4. Scan the **Save** barcode. (See the **Save/Cancel Barcodes** in **Appendix**)
5. Scan the **Enable Custom Prefix** barcode.
6. Scan the **Exit Setup** barcode.

0006000

\*\* Exit Setup

0006010

**Enter Setup**

---

## AIM ID Prefix

AIM (Automatic Identification Manufacturers) ID defines symbology identifier (For the details, see the **AIM ID Table** in **Appendix**). If AIM ID prefix is enabled, the scanner will add the symbology identifier before the scanned data after decoding.

0308000

**\*\* Disable AIM ID Prefix**

0308030

**Enable AIM ID Prefix**

AIM ID is not user programmable.

## Code ID Prefix

Code ID can also be used to identify barcode type. Unlike AIM ID, Code ID is user programmable. Code ID can only consist of one or two English letters.

0307000

**\*\* Disable Code ID Prefix**

0307010

**Enable Code ID Prefix**

0006000

## Custom Suffix

### Enable/Disable Custom Suffix

If custom suffix is enabled, you are allowed to append to the data a user-defined suffix that cannot exceed 10 characters. For example, if the custom suffix is “AB” and the barcode data is “123”, the Host will receive “123AB”.

0306000

**\*\*Disable Custom Suffix**

0306010

**Enable Custom Suffix**

### Set Custom Suffix

To set a custom suffix, scan the **Set Custom Suffix** barcode and then the numeric barcodes corresponding to the hexadecimal value of a desired suffix. To save the settings, scan the **Save** barcode.

**Note:** A custom suffix cannot exceed 10 characters.

0301000

**Set Custom Suffix**

**E**  
*sample*

**Set the custom suffix to “CODE” (its hexadecimal value is 0x43/0x4F/0x44/0x45):**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Custom Suffix** barcode.
3. Scan the numeric barcodes “4”, “3”, “4”, “F”, “4”, “4”, “4” and “5”. (See the **Digit Barcodes** in **Appendix**)
4. Scan the **Save** barcode. (See the **Save/Cancel Barcodes** in **Appendix**)
5. Scan the **Enable Custom Suffix** barcode.
6. Scan the **Exit Setup** barcode.

0006000

**\*\* Exit Setup**

0006010

**Enter Setup**

---

## Terminating Character Suffix

### Enable/Disable Terminating Character Suffix

A terminating character such as carriage return (CR) or carriage return/line feed pair (CRLF) can only be used to mark the end of data, which means nothing can be added after it.

0309000

**Disable Terminating Character Suffix**

0309010

**\*\* Enable Terminating Character Suffix**

### Set Terminating Character Suffix

The scanner provides a shortcut for setting the terminating character suffix to 0x0D or 0x0D,0x0A and enabling it by scanning the following barcode.

0310010

**Terminating Character 0x0D**

0310020

**\*\* Terminating Character 0x0D,0x0A**

0006000

**\*\* Exit Setup**

0006010

**Enter Setup**

---

To set a terminating character suffix, scan the **Set Terminating Character Suffix** barcode and the numeric barcodes representing the hexadecimal value of a desired terminating character and then scan the **Save** barcode. Refer to the **ASCII Table** in **Appendix** for hexadecimal values of terminating characters.

**Note:** A terminating character suffix cannot exceed 2 characters.

0310000

**Set Terminating Character Suffix**

**E**  
*example*

**Set the terminating character suffix to 0x0A:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Terminating Character Suffix** barcode.
3. Scan the numeric barcodes “0” and “A”. (See the **Digit Barcodes** in **Appendix**)
4. Scan the **Save** barcode. (See the **Save/Cancel Barcodes** in **Appendix**)
5. Scan the **Exit Setup** barcode.

0006000

**\*\* Exit Setup**

0006010

**Enter Setup**

## Chapter 7 Ambient Illumination

Ambient lighting conditions may vary from one operating environment to another, such as fluorescent lit warehouses or sunlit open spaces. Fluorescent lights may flicker when using AC power source in 50-60Hz. Usually indoor illuminance is around 1,000 lux while outdoor illuminance may reach 60,000 lux or even over 100,000 lux.

Two options are provided for ambient illumination settings:

**Normal Illuminance:** applicable to most indoor/outdoor environments.

**High Illuminance:** applicable to special environments with super-intense light source.

Change to this settings will not take effect until the scanner reboots or wakes from sleep.

0313150

**\*\* Normal Illuminance (0~60000lux)**

0313151

**High Illuminance (60000~120000lux)**

0006000

**\*\* Exit Setup**

0006010

Enter Setup

## Chapter 8 Data Formatter

### Introduction

You may use the Data Formatter to modify the scanner's output. For example, you can use the Data Formatter to insert characters at certain points in barcode data or to suppress/ replace/ send certain characters in barcode data as it is scanned.

Normally, when you scan a barcode, it gets outputted automatically; however, when you create a format, you must use a "send" command (see the **Send Commands** in this chapter) within the format programming to output data. The maximum size of formatter commands in a data format is 112 characters. By default, the data formatter is disabled. Enable it when required. If you have changed data format settings, and wish to clear all formats and return to the factory defaults, scan the **Default Data Format** code below.

0323100

\*\* Default Data Format

### Add a Data Format

Data format is used to edit barcode data only. You can program up to four data formats, i.e. Format\_0, Format\_1, Format\_2 and Format\_3. When you create a data format, you must specify the application scope of your data format (such as barcode type and data length) and include formatter commands. When scanned data does not match your data format requirements, you will hear the non-match error beep (if the non-match error beep is ON).

There are two methods to program a data format: Programming with barcodes and programming with a batch command.

0006000

\*\* Exit Setup

0006010

**Enter Setup**

---

## Programming with Barcodes

The following explains how to program a data format by scanning the specific barcodes. Scanning any irrelevant barcode or failing to follow the setting procedure will result in programming failure. To find the alphanumeric barcodes needed to create a data format, see the ***Digit Barcodes*** in **Appendix**.

**Step 1:** Scan the **Enter Setup** barcode.

**Step 2:** Scan the **Add Data Format** barcode.

0323000

**Add Data Format**

**Step 3:** Select data format.

Scan a numeric barcode **0** or **1** or **2** or **3** to set this to Format\_0 or Format\_1 or Format\_2 or Format\_3.

**Step 4:** Select formatter command type.

Specify what type of formatter commands will be used. Scan a numeric barcode “6” to select formatter command type 6. (See the ***Formatter Command Type 6*** in this chapter for more information)

**Step 5:** Set interface type

Scan **999** for any interface type.

**Step 6:** Set Symbology ID Number

Refer to the ***Symbology ID Number*** in **Appendix** and find the ID number of the symbology to which you want to apply the data format. Scan three numeric barcodes for the symbology ID number. If you wish to create a data format for all symbologies, scan **999**.

**Step 7:** Set barcode data length

Specify what length of data will be acceptable for this symbology. Scan the four numeric barcodes that represent the data length. 9999 is a universal number, indicating all lengths. For example, 32 characters should be entered as 0032.

0006000

**\*\* Exit Setup**

0006010

Enter Setup

---

**Step 8:** Enter formatter command

Refer to the **Formatter Command Type 6** in this chapter. Scan the alphanumeric barcodes that represent the command you need to edit data. For example, when a command is F141, you should scan F141. A command can contain up to 112 characters.

**Step 9:** Scan the **Save** barcode from the **Save/Cancel Barcodes** in **Appendix** to save your data format.

**Example:** Program format\_0 using formatter command type 6, Code 128 containing 10 characters applicable, send all characters followed by "A".

- |   |   |
|---|---|
| 1. Scan the <b>Enter Setup</b> barcode        | Enter the Setup mode                          |
| 2. Scan the <b>Add Data Format</b> barcode    | Add a data format                             |
| 3. Scan the <b>0</b> barcode                  | Select format_0                               |
| 4. Scan the <b>6</b> barcode                  | Select formatter command type 6               |
| 5. Scan the <b>9</b> barcode three times      | All interface types applicable                |
| 6. Scan the barcodes <b>002</b>               | Only Code 128 applicable                      |
| 7. Scan the barcodes <b>0010</b>              | Only a length of 10 characters applicable     |
| 8. Scan the alphanumeric barcodes <b>F141</b> | Send all characters followed by "A" (hex: 41) |
| 9. Scan the <b>Save</b> barcode               | Save the data format                          |

0006000

\*\* Exit Setup

0006010

Enter Setup

---

## Programming with a Batch Command

A data format can also be created by a batch command sent from the host device.

**Syntax:** “nls0323000” + “=” + Double Quotation Mark (”) + Parameter Value + Double Quotation Mark (”) + “;”

Parameter Value consists of the following elements:

**Data format:** 0~3 (1 character). 0, 1, 2 and 3 represent Format\_0, Format\_1, Format\_2 and Format\_3 respectively.

**Formatter command type:** 6 (1 character).

**Interface type:** 999 (3 characters).

**Symbology ID Number:** The ID number of the symbology (refer to the **Symbology ID Number** in **Appendix**) to which you want to apply the data format (3 characters). 999 indicates all symbologies.

**Data length:** The length of data that will be acceptable for this symbology (4 characters). 9999 indicates all lengths. For example, 32 characters should be entered as 0032.

**Formatter commands:** The command string used to edit data (max. 112 characters). For more information, see the **Formatter Command Type 6** in this chapter.

Note: A batch command used to create a data format must conform to the syntax above. Returned value 0x06 indicates success; returned value 0x15 indicates failure.

To streamline the programming process, you may as well generate a batch barcode by inputting the batch command (e.g. **0323000=“069990020010F141”;**) used to create a data format. See the **Use Batch Barcode** in Chapter 9 to learn how to put a batch barcode into use.

**Example:** Program format\_0 using formatter command type 6, Code 128 containing 10 characters applicable, send all characters followed by “A”.

Batch command: **nls0323000=“069990020010F141”;**

0006000

\*\* Exit Setup

0006010

Enter Setup

---

## Enable/Disable Data Formatter

When Data Formatter is disabled, the data format you have enabled becomes invalid.

0323020

**\*\* Disable Data Formatter**

You may wish to require the data to conform to a data format you have created. The following settings can be applied to your data format:

**Enable Data Formatter, Required, Keep Prefix/Suffix:** Scanned data that meets your data format requirements is modified accordingly and gets outputted along with prefixes and suffixes (if prefix and suffix are enabled). Any data that does not match your data format requirements generates an error beep (if Non-Match Error Beep is turned ON) and the data in that barcode is not transmitted.

**Enable Data Formatter, Required, Drop Prefix/Suffix:** Scanned data that meets your data format requirements is modified accordingly and gets outputted without prefixes and suffixes (even if prefix and suffix are enabled). Any data that does not match your data format requirements generates an error beep (if Non-Match Error Beep is turned ON) and the data in that barcode is not transmitted.

**Enable Data Formatter, Not Required, Keep Prefix/Suffix:** Scanned data that meets your data format requirements is modified accordingly and gets outputted along with prefixes and suffixes (if prefix and suffix are enabled). Barcode data that does not match your data format requirements is transmitted as read along with prefixes and suffixes (if prefix and suffix are enabled).

**Enable Data Formatter, Not Required, Drop Prefix/Suffix:** Scanned data that meets your data format requirements is modified accordingly and gets outputted without prefixes and suffixes (even if prefix and suffix are enabled). Barcode data that does not match your data format requirements is transmitted as read along with prefixes and suffixes (if prefix and suffix are enabled).

0006000

**\*\* Exit Setup**

0006010

**Enter Setup**

---

0323040

**Enable Data Formatter, Required, Keep Prefix/Suffix**

0323041

**Enable Data Formatter, Required, Drop Prefix/Suffix**

0323042

**Enable Data Formatter, Not Required, Keep Prefix/Suffix**

0323043

**Enable Data Formatter, Not Required, Drop Prefix/Suffix**

## Non-Match Error Beep

If Non-Match Error Beep is turned ON, the scanner generates an error beep when a barcode is encountered that does not match your required data format.

0323060

**\*\* Non-Match Error Beep ON**

0323061

**Non-Match Error Beep OFF**

0006000

**\*\* Exit Setup**

0006010

Enter Setup

---

## Multiple Data Formats

After the Data Formatter is enabled, you can set the scanner to use one or multiple data formats by scanning the appropriate barcode below.

**Multiple Data Formats Off:** Only one data format (default: Format\_0) is put into use. To learn how to switch to another data format, see the “Data Format Selection” section below.

**Multiple Data Formats On:** The scanner toggles from Format\_0 through Format\_3 until scanned data matches the requirements of one data format. If no match is found, the scanner generates an error beep (if Non-Match Error Beep is turned ON) and the data is not transmitted.

0323080

**\*\* Multiple Formats Off**

0323081

**Multiple Formats On**

## Data Format Selection

You can select a data format you want to use by scanning the appropriate barcode below. Note that this setting is valid only when the **Multiple Data Formats** feature is turned off.

0323030

**\*\* Format\_0**

0323031

**Format\_1**

0323032

**Format\_2**

0323033

0006000

**\*\* Exit Setup**

0006010

**Enter Setup**

---

## Change Data Format for a Single Scan

You can switch between data formats for a single scan. The next barcode is scanned using the data format selected here, then reverts to the format you have selected above. This setting is valid only when the **Multiple Data Formats** feature is turned off.

For example, you may have set your scanner to use the data format you saved as Format\_3. You can switch to Format\_1 for a single trigger pull by scanning the **Single Scan – Format\_1** barcode below. The next barcode that is scanned uses Format\_1, then reverts back to Format\_3.

Note: This setting will be lost by removing power from the scanner, or turning off/ rebooting the device.

0323050

**Single Scan – Format\_0**

0323051

**Single Scan – Format\_1**

0323052

**Single Scan – Format\_2**

0323053

**Single Scan – Format\_3**

## Formatter Command Type 6

When working with the Data Formatter, a virtual cursor is moved along your input data string. The following commands are used to both move this cursor to different positions, and to select, replace, and insert data into the final output. For the hex value of ASCII characters involved in the commands, refer to *ASCII Table* in Appendix.

### Send Commands

#### F1 Send all characters

Syntax=F1xx (xx: The insert character's hex value)

Include in the output message all of the characters from the input message, starting from current cursor position, followed by an insert character.

#### F2 Send a number of characters

Syntax=F2nxx (nn: The numeric value (00-99) for the number of characters; xx: The insert character's hex value)

Include in the output message a number of characters followed by an insert character. Start from the current cursor position and continue for "nn" characters or through the last character in the input message, followed by character "xx."

#### F2 Example: Send a number of characters

1234567890ABCDEFGHIJ

Send the first 10 characters from the barcode above, followed by a carriage return.

Command string: **F2100D**

F2 is the "Send a number of characters" command

10 is the number of characters to send

0D is the hex value for a CR

The data is output as: **1234567890**

**<CR>**

---

0006000

\*\* Exit Setup

0006010

Enter Setup

---

### F3 Send all characters up to a particular character

Syntax=F3ssxx (ss: The particular character's hex value; xx: The insert character's hex value)

Include in the output message all characters from the input message, starting with the character at the current cursor position and continuing to, but not including, the particular character "ss," followed by character "xx." The cursor is moved forward to the "ss" character.

#### F3 Example: Send all characters up to a particular character

1234567890ABCDEFGHIJ

Using the barcode above, send all characters up to but not including "D," followed by a carriage return.

Command string: **F3440D**

F3 is the "Send all characters up to a particular character" command

44 is the hex value for a "D"

0D is the hex value for a CR

The data is output as: **1234567890ABC**

**<CR>**

### E9 Send all but the last characters

Syntax=E9nn (nn: The numeric value (00-99) for the number of characters that will not be sent at the end of the message)

Include in the output message all but the last "nn" characters, starting from the current cursor position. The cursor is moved forward to one position past the last input message character included.

### F4 Insert a character multiple times

Syntax=F4xxnn (xx: The insert character's hex value; nn: The numeric value (00-99) for the number of times it should be sent)

Send "xx" character "nn" times in the output message, leaving the cursor in the current position.

---

0006000

\*\* Exit Setup

0006010

Enter Setup

---

### **E9 and F4 Example: Send all but the last characters, followed by 2 tabs**

1234567890ABCDEFGHIJ

Send all characters except for the last 8 from the barcode above, followed by 2 tabs.

Command string: **E908F40902**

E9 is the “Send all but the last characters” command

08 is the number of characters at the end to ignore

F4 is the “Insert a character multiple times” command

09 is the hex value for a horizontal tab

02 is the number of times the tab character is sent

The data is output as: **1234567890AB<tab><tab>**

### **B3 Insert symbology name**

Insert the name of the barcode’s symbology in the output message, without moving the cursor.

### **B4 Insert barcode length**

Insert the barcode’s length in the output message, without moving the cursor. The length is expressed as a numeric string and does not include leading zeros.

0006000

\*\* Exit Setup

0006010

Enter Setup

---

### B3 and B4 Example: Insert the symbology name and length

Send the symbology name and length before the barcode data from the barcode above. Break up these insertions with spaces. End with a carriage return.

Command string: **B3F42001B4F42001F10D**

B3 is the “Insert symbology name” command

F4 is the “Insert a character multiple times” command

20 is the hex value for a space

01 is the number of time the space character is sent

B4 is the “Insert barcode length” command

F4 is the “Insert a character multiple times” command

20 is the hex value for a space

01 is the number of time the space character is sent

F1 is the “Send all characters” command

0D is the hex value for a CR

The data is output as: **Code128 20 1234567890ABCDEFGHIJ**  
**<CR>**

### Move Commands

#### F5 Move the cursor forward a number of characters

Syntax=F5nn (nn: The numeric value (00-99) for the number of characters the cursor should be moved ahead)

Move the cursor ahead “nn” characters from current cursor position.

---

0006000

\*\* Exit Setup

0006010

Enter Setup

---

### **F5 Example: Move the cursor forward and send the data**

Move the cursor forward 3 characters, then send the rest of the barcode data from the barcode above. End with a carriage return.

Command string: **F503F10D**

F5 is the “Move the cursor forward a number of characters” command

03 is the number of characters to move the cursor

F1 is the “Send all characters” command

0D is the hex value for a CR

The data is output as: **4567890ABCDEFGHIJ**

**<CR>**

### **F6 Move the cursor backward a number of characters**

Syntax=F6nn (nn: The numeric value (00-99) for the number of characters the cursor should be moved back)

Move the cursor back “nn” characters from current cursor position.

### **F7 Move the cursor to the beginning**

Syntax=F7

Move the cursor to the first character in the input message.

### **EA Move the cursor to the end**

Syntax=EA

Move the cursor to the last character in the input message.

---

0006000

\*\* Exit Setup

0006010

Enter Setup

---

## Search Commands

### F8 Search forward for a character

Syntax=F8xx (xx: The search character's hex value)

Search the input message forward for "xx" character from the current cursor position, leaving the cursor pointing to the "xx" character.

#### F8 Example: Send barcode data that starts after a particular character

Search for the letter "D" in barcodes and send all the data that follows, including the "D". Using the barcode above:

Command string: **F844F10D**

F8 is the "Search forward for a character" command

44 is the hex value for "D"

F1 is the "Send all characters" command

0D is the hex value for a CR

The data is output as: **DEFGHIJ**

**<CR>**

### F9 Search backward for a character

Syntax=F9xx (xx: The search character's hex value)

Search the input message backward for "xx" character from the current cursor position, leaving the cursor pointing to the "xx" character.

0006000

\*\* Exit Setup

0006010

Enter Setup

---

### **B0 Search forward for a string**

Syntax=B0nnnnS (nnnn: The string length (up to 9999); S: The ASCII hex value of each character in the string)

Search forward for “S” string from the current cursor position, leaving cursor pointing to “S” string. For example, B0000454657374 will search forward for the first occurrence of the 4-character string “Test.”

### **B0 Example: Send barcode data that starts after a string of characters**

1234567890ABCDEFGHIJ

Search for the letters “FGH” in barcodes and send all the data that follows, including “FGH.” Using the barcode above:

Command string: **B00003464748F10D**

B0 is the “Search forward for a string” command

0003 is the string length (3 characters)

46 is the hex value for “F”

47 is the hex value for “G”

48 is the hex value for “H”

F1 is the “Send all characters” command

0D is the hex value for a CR

The data is output as: **FGHIJ**

**<CR>**

### **B1 Search backward for a string**

Syntax=B1nnnnS (nnnn: The string length (up to 9999); S: The ASCII hex value of each character in the string)

Search backward for “S” string from the current cursor position, leaving cursor pointing to “S” string. For example, B1000454657374 will search backward for the first occurrence of the 4-character string “Test.”

0006000

\*\* Exit Setup

0006010

Enter Setup

---

### **E6 Search forward for a non-matching character**

Syntax=E6xx (xx: The search character's hex value)

Search the input message forward for the first non-"xx" character from the current cursor position, leaving the cursor pointing to the non-"xx" character.

#### **E6 Example: Remove zeros at the beginning of barcode data**

This example shows a barcode that has been zero filled. You may want to ignore the zeros and send all the data that follows. E6 searches forward for the first character that is not zero, then sends all the data after, followed by a carriage return. Using the barcode above:

Command string: **E630F10D**

E6 is the "Search forward for a non-matching character" command

30 is the hex value for 0

F1 is the "Send all characters" command

0D is the hex value for a CR

The data is output as: **37692**

**<CR>**

### **E7 Search backward for a non-matching character**

Syntax=E7xx (xx: The search character's hex value)

Search the input message backward for the first non-"xx" character from the current cursor position, leaving the cursor pointing to the non-"xx" character.

0006000

\*\* Exit Setup

0006010

Enter Setup

---

## Miscellaneous Commands

### FB Suppress characters

Syntax=FBnxyy..zz (nn: The numeric value (00-15) for the number of suppressed characters; xxyy..zz: The hex value of the characters to be suppressed)

Suppress all occurrences of up to 15 different characters, starting at the current cursor position, as the cursor is advanced by other commands.

### FB Example: Remove spaces in barcode data

345 678 90

This example shows a barcode that has spaces in the data. You may want to remove the spaces before sending the data. Using the barcode above:

Command string: **FB0120F10D**

FB is the "Suppress characters" command

01 is the number of the characters to be suppressed

20 is the hex value for a space

F1 is the "Send all characters" command

0D is the hex value for a CR

The data is output as: **34567890**

<CR>

0006000

\*\* Exit Setup

0006010

Enter Setup

---

### E4 Replace characters

Syntax=E4nnxx<sub>1</sub>xx<sub>2</sub>yy<sub>1</sub>yy<sub>2</sub>...zz<sub>1</sub>zz<sub>2</sub> (nn: The total count of the number of characters (characters to be replaced plus replacement characters; xx<sub>1</sub>: The characters to be replaced, xx<sub>2</sub>: The replacement characters, continuing through zz<sub>1</sub> and zz<sub>2</sub>)

Replace up to 15 characters in the output message, without moving the cursor.

### E4 Example: Replace zeros with CRs in barcode data

1234056780ABC

If the barcode has characters that the host application does not want included, you can use the E4 command to replace those characters with something else. In this example, you will replace the zeros in the barcode above with carriage returns.

Command string: **E402300DF10D**

E4 is the “Replace characters” command

02 is the total count of characters to be replaced, plus the replacement characters (0 is replaced by CR, so total characters=2)

30 is the hex value for 0

0D is the hex value for a CR (the character that will replace the 0)

F1 is the “Send all characters” command

0D is the hex value for a CR

The data is output as: **1234**

**5678**

**ABC**

**<CR>**

0006000

\*\* Exit Setup

0006010

Enter Setup

---

## BA Replace a string with another

Syntax = BAnnNN<sub>1</sub>SS<sub>1</sub>NN<sub>2</sub>SS<sub>2</sub>

nn: The count of replacements to be made, if nn=00 or nn>=the number of occurrences of a string to be replaced, then replace all occurrences of that string.

NN<sub>1</sub>: The length of the string to be replaced, NN<sub>1</sub>>0.

SS<sub>1</sub>: The ASCII hex value of each character in the string to be replaced.

NN<sub>2</sub>: The length of replacement string, NN<sub>2</sub>>=0. To replace string "SS<sub>1</sub>" with NUL (i.e. delete string "SS<sub>1</sub>"), you should set NN<sub>2</sub> to 00 and leave out SS<sub>2</sub>.

SS<sub>2</sub>: The ASCII hex value of each character in the replacement string

From the current cursor position, search forward for the occurrence of "SS<sub>1</sub>" string (of length "NN<sub>1</sub>") and replace the string with "SS<sub>2</sub>" string (of length "NN<sub>2</sub>") in the output message until every "SS<sub>1</sub>" string is replaced or the count of replacements made reaches "nn" times, without moving the cursor.

### BA Example: Replace "23"s with "ABC"s in barcode data

cd123abc23bc12ab232

If the barcode has a string of characters that the host application does not want included, you can use the BA command to replace the string with something else. In this example, you will replace the "23"s in the barcode above with "ABC"s.

Command string: **BA0002323303414243F100**

BA is the "Replace a string with another" command

00 is the count of replacements to be made, 00 means to replace all occurrences of that string

02 is the length of the string to be replaced

---

0006000

\*\* Exit Setup

0006010

**Enter Setup**

---

32 is the hex value for 2 (character in the string to be replaced)

33 is the hex value for 3 (character in the string to be replaced)

03 is the length of the replacement string

41 is the hex value for A (character in the replacement string)

42 is the hex value for B (character in the replacement string)

43 is the hex value for C (character in the replacement string)

F1 is the "Send all characters" command

00 is the hex value for a NUL

The data is output as: **cd1ABCabcABCbc12abABC2**

### **BA Example: Remove only the first occurrence of "23"s in barcode data**

If the barcode has a string of characters that the host application wants removed, you can use the BA command to replace the string with NUL. In this example, you will remove the first occurrence of "23" in the barcode above.

Command string: **BA0102323300F100**

BA is the "Replace a string with another" command

01 is the count of replacements to be made

02 is the length of the string to be replaced

32 is the hex value for 2 (character in the string to be replaced)

33 is the hex value for 3 (character in the string to be replaced)

00 is the length of the replacement string, 00 means to replace the string to be replaced with NUL

F1 is the "Send all characters" command

00 is the hex value for a NUL

The data is output as: **cd1abc23bc12ab232**

0006000

**\*\* Exit Setup**

0006010

**Enter Setup**

## Chapter 9 Batch Programming

### Introduction

Batch programming enables users to integrate a batch of commands into a single batch barcode.

Listed below are batch programming rules:

1. Command format: Command + "=" + Parameter Value.
2. Each command is terminated by a semicolon (;). Note that there is no space between a command and its terminator semicolon.
3. Use the barcode generator software to generate a 2D batch barcode.

Example: Create a batch barcode for **Illumination Always On** (0200010), **Sense Mode** (0302010), **Decode Session Timeout** (0313000) = 2s:

1. Input the commands:

```
0200010;0302010;0313000=2000;
```

2. Generate a batch barcode.

When setting up a scanner with the above configuration, scan the **Enable Batch Barcode** barcode and then the batch barcode generated.

0001110

**Enable Batch Barcode**

0006000

**\*\* Exit Setup**

0006010

Enter Setup

---

## Create a Batch Command

A batch command may contain a number of individual commands each of which is terminated by a semicolon (;).

Command Structure: Command (+ "=" + Parameter Value)

4 command syntaxes are described as below:

### 1. Syntax 1: Command

This syntax applies to most configuration situations.

**Example:**

Set the Baud Rate to 38400bps: **0100060**

Enable the Sense Mode: **0302010**

### 2. Syntax 2: Command + "=" + Decimal Digit(s)

This syntax applies to the options/features programming which requires the entry of parameter value (decimal), such as the Maximum/Minimum Length, Decode Session Timeout, Reread Timeout and Sensitivity.

**Example:**

Set the Decode Session Timeout to 3000ms: **0313000=3000**

Set the Sensitivity to (level) 10: **0312040=10**

### 3. Syntax 3: Command + "=" + Hexadecimal Digit(s) (e.g., 0x101A, 0x2C03)

This syntax applies to the features/options programming like the Custom Prefix/Suffix, Terminating Character Suffix, Code ID Suffix, which requires the entry of parameter value (hexadecimal).

**Example:**

Set the Terminating Character Suffix to CR/LF: **0310000=0x0D0A**

### 4. Syntax 4: Command + "=" + Double Quotation Marks

For situations where the parameter value is visible character in Syntax 3, this syntax is also appropriate.

**Example:**

Set the Custom Prefix to AUTO-ID: **0300000="AUTO-ID"**

0006000

\*\* Exit Setup

0006010

**Enter Setup**

---

## Create a Batch Barcode

Batch barcodes can be produced in the format of PDF417, QR Code or Data Matrix.

Example: Create a batch barcode for **Illumination Always On, Sense Mode, Decode Session Timeout = 2s**:

1. Input the following commands:

```
0200010;0302010;0313000=2000;
```

2. Generate a QR batch barcode.

0006000

**\*\* Exit Setup**

0006010

**Enter Setup**

---

## Use Batch Barcode

To put a batch barcode into use, scan the following barcodes. (Use the example above.)

0006010

**Enter Setup**

0001110

**Enable Batch Barcode**

**Batch Barcode**

0006000

**Exit Setup**

0006000

**\*\* Exit Setup**

# Appendix

## Digit Barcodes

After scanning numeric barcode(s), you need to scan the **Save** barcode to save the data.

0~5

0

1

2

3

4

5

6

7

8

9

---

**A~F**

**A**

**B**

**C**

**D**

**E**

**F**

---

## Save/Cancel Barcodes

After reading numeric barcode(s), you need to scan the **Save** barcode to save the data. If you scan the wrong digit(s), you can either scan the **Cancel** barcode and then start the configuration all over again, or scan the **Delete the Last Digit** barcode and then the correct digit, or scan the **Delete All Digits** barcode and then the digits you want.

For instance, after reading the **Maximum Length** barcode and numeric barcodes “1”, “2” and “3”, you scan:

- ✧ **Delete the Last Digit:** The last digit “3” will be removed.
- ✧ **Delete All Digits:** All digits “123” will be removed.
- ✧ **Cancel:** The maximum length configuration will be cancelled. And the scanner is still in the setup mode.

## Factory Defaults Table

Parameter		Factory Default	Remark
<b>System Settings</b>			
Barcode Programming		Disabled	
Auto Power-Off Timeout		5 minutes	Applicable to Manual mode only
Illumination		Normal	
Aiming		Normal	
Startup Beep		Enabled	
Good Read Beep	Notification	Enabled	
	Beep Type	Type 3	
	Beep Volume	Loud	
NGR (Not Good Read) Message		Do not transmit	
		Null	
Scan Mode		Manual mode	
Manual Mode	Decode Session Timeout	3,000ms	Applicable to Trigger mode, Sense mode and Continuous mode 100~3,600,000ms

## ASCII Function Key Mapping Table

ASCII Function	ASCII Value (HEX)	No Function Key Mapping	Function Key Mapping
NUL (Null char.)	00	Null	Ctrl+2
SOH (Start of Header)	01	Keypad Enter	Ctrl+A
STX (Start of Text)	02	Caps Lock	Ctrl+B
ETX (End of Text)	03	Null	Ctrl+C
EOT (End of Transmission)	04	Null	Ctrl+D
ENQ (Enquiry)	05	Null	Ctrl+E
ACK (Acknowledgment)	06	Null	Ctrl+F
BEL (Bell)	07	Enter	Ctrl+G
BS (Backspace)	08	Left Arrow	Ctrl+H
HT (Horizontal Tab)	09	Horizontal Tab	Ctrl+I
LF (Line Feed)	0A	Down Arrow	Ctrl+J
VT (Vertical Tab)	0B	Vertical Tab	Ctrl+K
FF (Form Feed)	0C	Delete	Ctrl+L
CR (Carriage Return)	0D	Enter	Ctrl+M
SO (Shift Out)	0E	Insert	Ctrl+N
SI (Shift In)	0F	Esc	Ctrl+O
DLE (Data Link Escape)	10	F11	Ctrl+P
DC1 (XON) (Device Control 1)	11	Home	Ctrl+Q
DC2 (Device Control 2)	12	Print Screen	Ctrl+R
DC3 (XOFF) (Device Control 3)	13	Backspace	Ctrl+S
DC4 (Device Control 4)	14	tab+shift	Ctrl+T
NAK (Negative Acknowledgment)	15	F12	Ctrl+U
SYN (Synchronous Idle)	16	F1	Ctrl+V
ETB (End of Trans. Block)	17	F2	Ctrl+W
CAN (Cancel)	18	F3	Ctrl+X
EM (End of Medium)	19	F4	Ctrl+Y
SUB (Substitute)	1A	F5	Ctrl+Z
ESC (Escape)	1B	F6	See the following table
FS (File Separator)	1C	F7	
GS (Group Separator)	1D	F8	
RS (Request to Send)	1E	F9	
US (Unit Separator)	1F	F10	

### ASCII Function Key Mapping Table (Continued)

The function key mappings of the last five characters in the previous table differ from one keyboard layout to another.

Country/ Keyboard Layout	Function Key Mapping				
	1B	1C	1D	1E	1F
United States	Ctrl+[	Ctrl+\	Ctrl+]	Ctrl+6	Ctrl+-
Belgium	Ctrl+[	Ctrl+<	Ctrl+]	Ctrl+6	Ctrl+-
Scandinavia	Ctrl+8	Ctrl+<	Ctrl+9	Ctrl+6	Ctrl+-
France	Ctrl+^	Ctrl+8	Ctrl+\$	Ctrl+6	Ctrl+=
Germany		Ctrl+Ã	Ctrl++	Ctrl+6	Ctrl+-
Italy		Ctrl+\	Ctrl++	Ctrl+6	Ctrl+-
Switzerland		Ctrl+<	Ctrl+.	Ctrl+6	Ctrl+-
United Kingdom	Ctrl+[	Ctrl+ø	Ctrl+]	Ctrl+6	Ctrl+-
Denmark	Ctrl+8	Ctrl+\	Ctrl+9	Ctrl+6	Ctrl+-
Norway	Ctrl+8	Ctrl+\	Ctrl+9	Ctrl+6	Ctrl+-
Spain	Ctrl+[	Ctrl+\	Ctrl+]	Ctrl+6	Ctrl+-
